S.E. (Electronics/E&TC Engineering) (II Sem.) EXAMINATION, 2018 CONTROL SYSTEMS

(2015 **PATTERN**)

Time: Two Hours

Maximum Marks: 50

- N.B. :- (i) Answer Q. No. 1 or Q. No. 2, Q. No. 3 or Q. No. 4,
 Q. No. 5 or Q. No. 6, Q. No. 7 or Q. No. 8.
 - (ii) Neat diagrams must be drawn wherever necessary.
 - (iii) Figures to the right indicate full marks.
 - (iv) Use of logarithmic tables, slide rule, Mollier charts, electronic pocket calculator and steam tables is allowed.
 - (v) Assume suitable data, if necessary.
- 1. (A) Determine the overall transfer function Y(s)/R(s) for the signal flow graph shown in Fig. 1. [6]

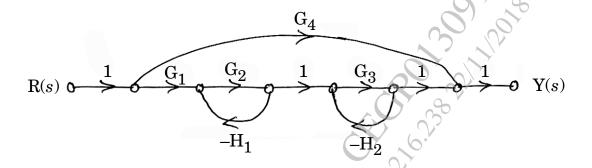

Fig. 1

(B) For the system with open loop transfer function:

$$G(s) = \frac{k_2}{s(s + k_1)}, H(s) = 1$$

with unity feedback, determine the values of k_1 and k_2 if the damping factor is 0.6 and peak time is 1 second. Also determine peak overshoot, natural frequency, rise time and settling time. [6]

Or

2. (A) Determine the overall transfer function Y(s)/R(s) for the block diagram shown in Fig. 2 using block diagram reduction rules.

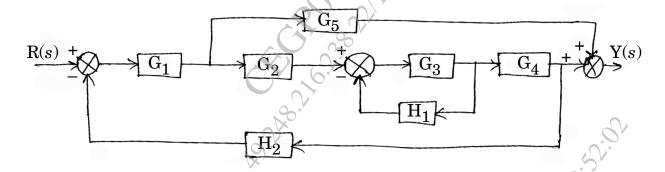

Fig. 2

(B) Determine static error constant $(k_p,\ k_v,\ k_a)$ and steady error for step input if the unity feedback system has open loop transfer function :

$$G(s) = \frac{k}{s(s+2)(s+4)+10}, k = 20.$$

[5459]-139

Also find k if steady state error for step input is 0.8. [6]

Investigate the stability of system with characteristic 3. (A) equation:

Q(s) =
$$s^4 + 9s^3 + 7s^2 + 4s + 3 = 0$$

using Routh stability test. Also determine the number of poles in the right half of s-plane. [4]

Draw Bode plot of the system with open loop transfer (B) function :

$$G(s) = \frac{20(s+5)}{s(s+10)}$$

and determine gain margin, phase margin. Also comment on stability. [8]

Determine resonant peak (M_r) and resonant frequency (W_r) 4. (A) for the unity feedback system with open loop transfer function: [4]

$$G(s) = \frac{9}{s(s+4)}.$$

Sketch the root locus of the system with: (B)

the root locus of the system with :
$$G(s) = \frac{k}{s(s+3)(s+5)}, \ H(s) = 1.$$
 controllable canonical and observable canonical

Obtain controllable canonical and observable canonical state **5.** (A) model of the system with transfer function: [6]

$$G(s) = \frac{s^2 + 7s + 9}{s^3 + 6s^2 + 4s + 3}.$$

[8]

(B) For the system with state model: [7]

$$\dot{x} = \begin{bmatrix} 0 & 2 & 1 \\ 1 & 0 & 3 \end{bmatrix} x + \begin{bmatrix} 0 \\ 1 \\ 0 \end{bmatrix} u$$

 $y = \begin{bmatrix} 1 & 0 & 0 \end{bmatrix} x$

investigate the state controllability and state observability.

Or

6. (A) Determine the transfer function of system with state model: [6]

$$\dot{x} = \begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ -3 & -4 & -7 \end{bmatrix} x + \begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix} u$$

 $y = \begin{bmatrix} 1 & 2 & 1 \end{bmatrix} x$

(B) Determine state transition matrix of the system with a state equation: [7]

$$\dot{x} = \begin{bmatrix} 0 & 1 \\ & \\ 0 & -4 \end{bmatrix} x$$

Also determine solution of state equation if:

$$x(0) = \begin{bmatrix} 1 \\ 1 \end{bmatrix}$$
.

7. (A) Determine the pulse transfer function of system shown in Fig. 3 using first principle (starred Laplace and z-transform method). [7]

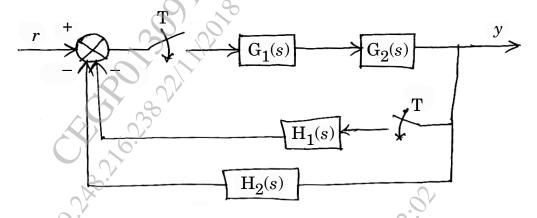

Fig. 3

- (B) Obtain the ladder diagrams for the following Boolean expressions without minimizing them: [6]
 - (i) $Y = A\overline{B}\overline{C} + \overline{A}BC$
 - (ii) $Y = AB + \overline{A}\overline{B}\overline{C} + A\overline{B}D$

Or

8. (A) Obtain the pulse transfer function of the system shown in Fig. 4 and determine its step response. [7]

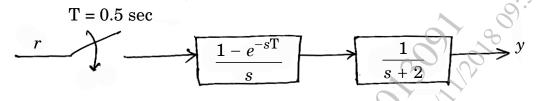

Fig. 4

(B) Write controller equations, transfer functions and draw block diagrams of PI and PD controllers. [6]
